

**Research and production enterprise**

Based on the Institute of Chemistry of the Nizhny Novgorod State Lobachevsky University

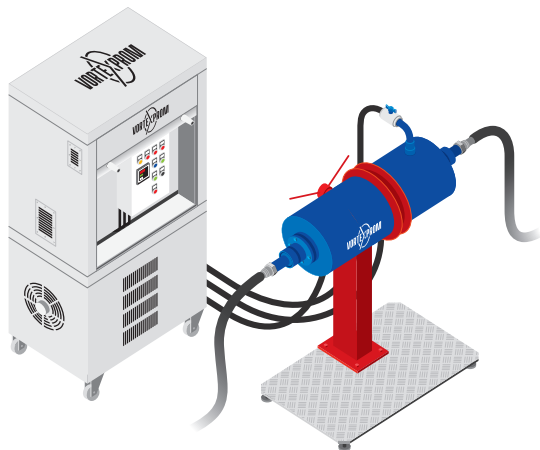

We are making equipment with which it is possible to disperse (grind) and mix various materials.

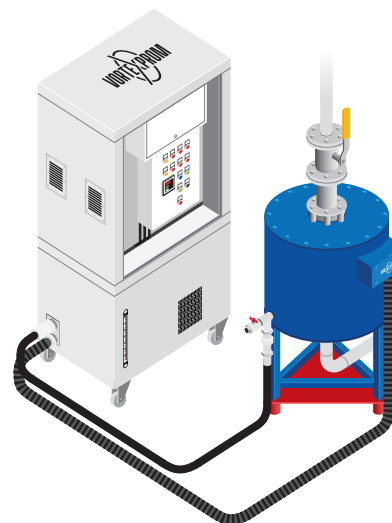

Company VORTEXPOM offers to consider innovative technology of cold stream mixing (blending, compounding).

This technology allows you to obtain particle sizes from 1 microns or less, with an initial particle size of 100 microns or more

**We are ready to offer you:**

VORTEXPROM CMD5 installation with an average capacity of 150 kg / day for dry substance florasulam. The average consumption of the installation is 7 kW/hour.

VORTEXPROM CMD35 installation with an average capacity of 600 kg/day for dry substance florasulam. The average consumption of the installation is 21 kW/hour.

**3 years of hardware warranty**

Best regards, Head of Sales Stanislav Seregin
